# **The Right Choice...**

**When something as fundamental as Civil & Structural Engineering is at stake, your choice of a suitable consultant is vital to the eventual success of a project. Whether you are looking for an independent consultant or a partner in the overall design team, you need someone with a proven track record and a high level of expertise, innovation and resources.**

Melia Smith & Jones has such a record. As forward-thinking Consulting Civil and Structural Engineers, we provide advice, consultancy and engineering services of the highest quality to a wide variety of clients. Our preference is to become involved early in projects to establish such fundamentals as form, layout, appropriate investigations and materials. We believe this leads to successful solutions with enhanced value.

**MSJ was established in 1987 and continues to strengthen its team which is committed to providing optimum solutions for all clients, from initial design through to completion:**

- New build, refurbishment & conversions
- Concrete, steel, masonry & timber structures
- Foundations & retaining walls
- Feasibility studies & conceptual designs
- Structural surveys, assessment & monitoring
- Advice to contractors on construction problems
- Temporary works advice & designs
- Infrastructure, roads & drainage

As an established, reputable consultancy, we take pride in a professional, friendly approach to these and many other related services. We listen carefully to your requirements and objectives and work closely with you and other construction professionals, building up strong working relationships to ensure a successful project, delivered on time and within budget.

# **Professional Service *PLUS...***

**MSJ firmly believe that we offer that little bit more, with a high level of Director involvement in projects.**

Alongside a broad-based civil and structural consultancy service, we take pride in rising to unusual challenges in niche markets, such as:

- Dynamic analysis, including feature stairs
- Waterslide projects in leisure parks across three continents
- Waste recycling technologies
- Independent technical reviews... asking the questions that need to be asked...

MSJ can work with you to solve the most challenging problems. We keep abreast of the latest developments in techniques, materials, standards and codes. Our responsibilities under CDM regulations are strictly adhered to, whilst in-house seminars and meetings are held on a regular basis as part of the company's commitment to Continuing Professional Development.

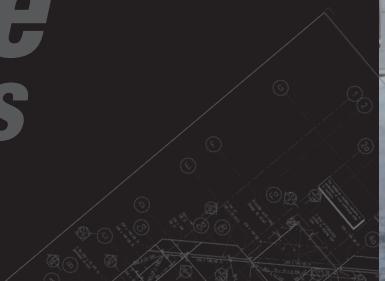

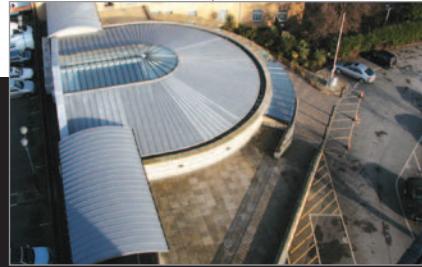

We have a wide range of knowledge and expertise across most market sectors. A large proportion of our work derives from referrals and repeat business from long standing, valued customers, who see MSJ very much as "a safe pair of hands".

- Commercial
- Education
- Energy
- Health
- Industrial
- Leisure
- Residential
- Retail
- Waste

**In Safe  
hands**

Melia Smith & Jones offers a broadly based civil and structural consultancy to a wide variety of clients. We carry out work on projects as diverse as designs for self-build eco-housing through to design and supervision of civil and structural work on multi-million pound developments.

Whatever your civil or structural design requirements, please contact us for assistance and advice, without obligation.
